

VILLAGE OF HUNTER

MAIN STREET RECONSTRUCTION AND PARK IMPROVEMENTS

Delaware recently provided planning, permitting, water and sewer infrastructure design and construction supervision for reconstruction of 2.2 miles of NYS Route 23A in the Village of Hunter. The highway project involved a full depth roadway reconstruction with asphalt concrete paving, new storm sewers and drop inlets, resetting of valve boxes, hydrants, manhole covers and grates, relocation of utility poles, installation of a concrete box culvert, and slope protection along the Schoharie Creek. The streetcaping component of the project included extensive rehabilitation of the historic Main Street including new period street lighting, brick pavers, sidewalks,

curbing, crosswalks and landscaping. NYSDOT funded the \$8.9 million project as a Reverse Betterment project. Construction was completed in 2007.

Delaware also created a multi-user trail system around Dolans Lake Park. The project includes new facilities at the Village Pavilion, a boat dock, shoreline improvements, a children's play area, benches, picnic facilities, period lighting, landscaping and parking. A pedestrian bridge arches over the Schoharie Creek and links the park to adjacent residential areas. The \$0.4 million project was completely funded by member items, grants and local donations.
