
VILLAGE OF HUNTER

NEW WATER PLANT/DISTRIBUTION SYSTEM

Delaware Engineering provided design and construction administration services for a new water treatment filtration plant for the Village of Hunter. The project also includes the development of new groundwater sources and installation of over 4 miles of distribution lines. The treatment plant utilizes pressure filters to treat a combination of ground and surface water with a total system capacity of approximately 400,000

gpd. The project involved the consolidation of the assets of a number of private water companies and coordination with over \$20 million in wastewater infrastructure and full depth highway reconstruction on State Route 23A. The project was completed in 2006.

Cost: \$5.4 million

System Capacity: 400,000 gpd
